Art Unit: 1642

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-29 and 37-40, drawn to a method for determining a predisposition or presence of prostate cancer, classified in class 435, subclass 6.
- II. Claims 30-36, drawn to a diagnostic kit, classified in class 435, subclass810.

The inventions are distinct, each from the other because of the following reasons:

The invention of group I represents a distinct method while the invention of group II represents a distinct product. Each group would require different searches in the literature, in part, due to the different classifications of each group. Searching both inventions would be unduly burdensome since each requires the consideration of different patentability issues.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different

Art Unit: 1642

product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the kit can be used in the materially different process of affinity chromatography.

Page 3

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Note:

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and a product claim is subsequently found allowable, withdrawn process claims that depend from or otherwise include all the limitations of the allowable product claim will be rejoined in accordance with the provisions of MPEP § 821.04. Process claims that depend from or otherwise include all the limitations of the patentable product will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103, and 112. Until an elected product claim is found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowed product claim will not be rejoined. See "Guidance on Treatment of Product and Process Claims in light of *In re Ochiai, In re Brouwer* and 35 U.S.C. § 103(b)," 1184 O.G. 86 (March 26, 1996). Additionally, in order to retain the right to rejoinder in accordance with the above policy, Applicant is advised that the process claims should be amended during prosecution either to maintain dependency on the product claims or to otherwise include the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder.

Art Unit: 1642

Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Species

Claim 2 is generic to a plurality of disclosed patentably distinct species of second specific prostate nucleic acids comprising the following: PSA, human kallikrein 2, PSMA, transglutaminase 4, acid phosphatase, and PCGEM1 nucleic acid. The above species represent separate and distinct molecules with different structures and functions such that one species could not be interchanged with the other. As such, each species would require different searches and the consideration of different patentability issues. Claim 7 is generic to a plurality of disclosed patentably distinct species of RNA amplification methods comprising the following: nucleic acid sequence-based amplification (NASBA), polymerase chain reaction (PCR), transcription mediated amplification (TMA), and ligase chain reaction. The above species represent separate and distinct methods that comprise different method steps such that one species could not be interchanged with the other. As such, each species would require different searches and the consideration of different patentability issues. Claims 10 and 12 are generic to a plurality of disclosed patentably distinct species of detection methods comprising the following: fluorescence, chimiluminescence, colorimetry, and molecular beacon. The above species represent separate and distinct methods that comprise different method steps such that one species could not be interchanged with the other. As such, each species would require different searches and the consideration of different patentability issues. Claim 22 is generic to a plurality of disclosed patentably Application/Control Number: 10/773,440

Art Unit: 1642

distinct species of **samples** comprising the following: urine, blood or a fraction thereof, and prostate biopsy. The above species represent separate and distinct products such that one species could not be interchanged with the other. As such, each species would require different searches and the consideration of different patentability issues.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of second specific prostate nucleic acids, RNA amplification methods, detection methods, and samples, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean E. Aeder, Ph.D. whose telephone number is 571-272-8787. The examiner can normally be reached on M-F: 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Siew can be reached on 571-272-0787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
